

Paréa Wander

paréa — your circle of friends, and the joy of being together

Group adventures that adapt when you wander off.

AGENTIC AI SF HACKATHON

Group plans break. Nothing fixes them.

- You pick a plan once
Wrong vibe, energy fades, people drift.
- Apps recommend and forget
No app reacts to what the group *actually does*.
- The plan never changes with you
Static itineraries can't keep up with real life.

A self-revising guide, not a recommender

Lives in your chat

Runs live in your group chat. No new app to install.

Holds a belief

Maintains a **belief** about what fits your group.

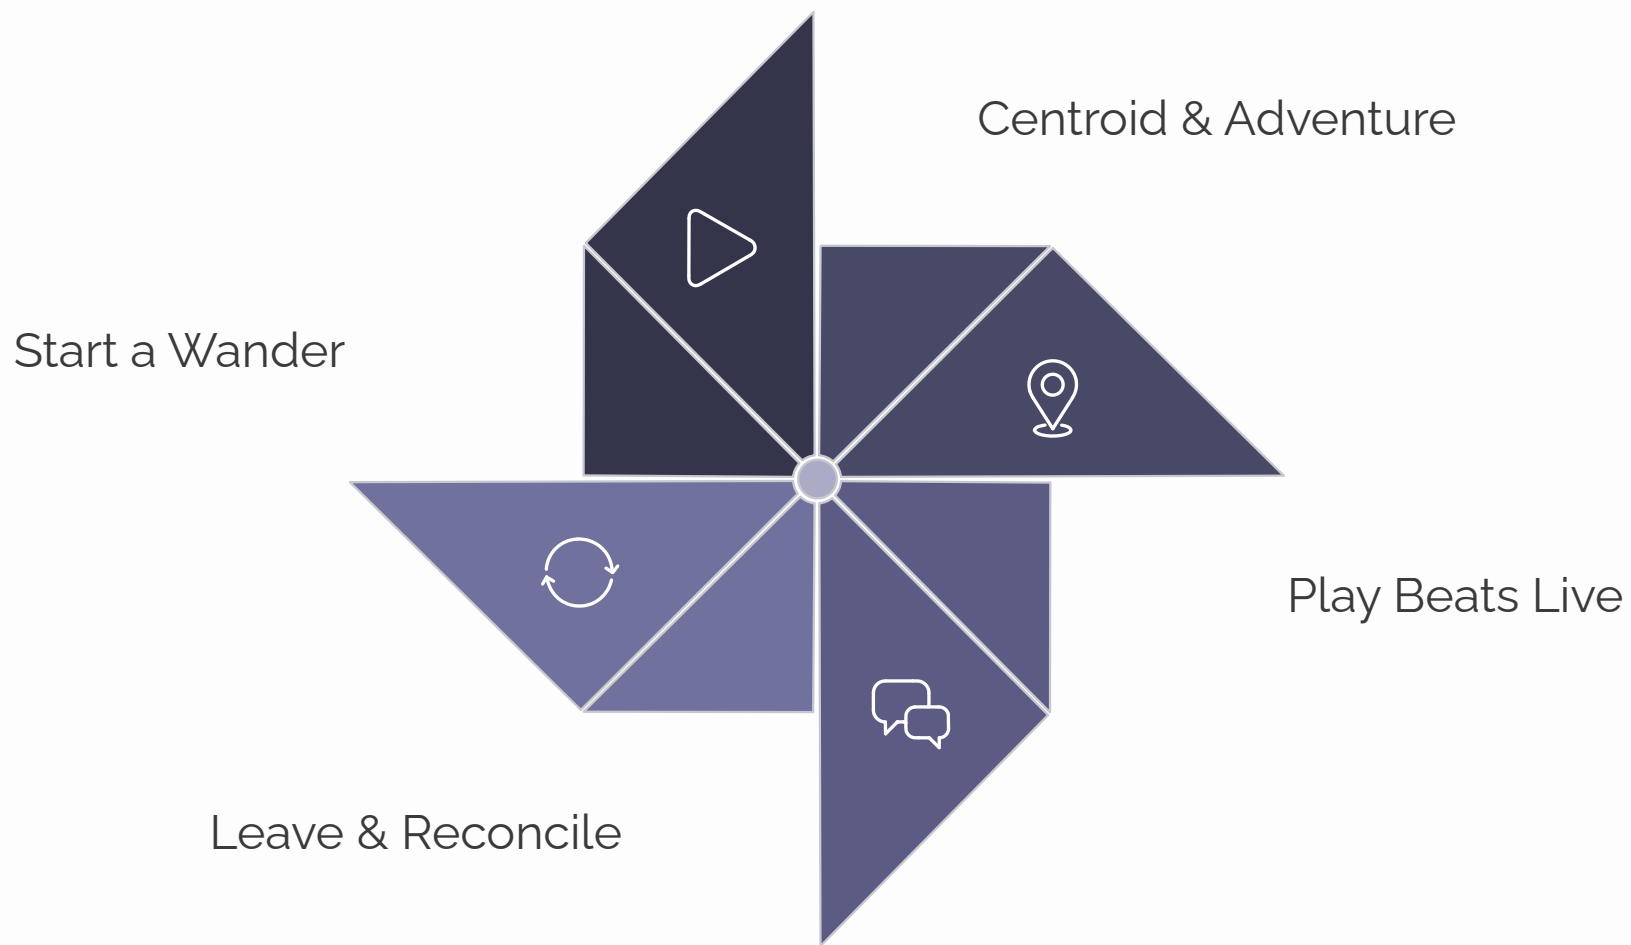

Revises and reroutes

When reality contradicts the plan, it pivots.

Live venue data

Real adventures from live SF data, any neighborhood, any vibe.

The Loop

The pivot is the magic.

Four sponsor tools. Each load-bearing.

RocketRide

Live adventure generation from venue data.

Butterbase

Backend, group state, sessions, auth.

XTrace

The self-revising belief layer. Holds what fits the group, revises on contradiction. *(the core)*

Photon

Delivery in the group's own chat. *(the client)*

📄 + thin mobile web page for live GPS

Privacy by design

- Individual locations are **never shared or stored**
- Only a Gaussian-noised group centroid is computed, once, for a single meeting point
- No movement history. No tracking.
- *Differential-privacy-style geographic aggregation*

Demo: The Reroute

Adventures aren't a fixed list — generated on the fly from live SF venue data, for any neighborhood, any vibe.

01

Start a Wander

Friend taps near the Presidio. Friends join, pick "**mellow.**"

03

Group drifts out of zone

System detects it. Belief revises.

02

Live adventure generated

Real, current SF venue data powers the itinerary.

04

Pivot: Foodie Wander in Chinatown

Good Mong Kok Bakery → Vital Tea Leaf → Golden Gate Bakery

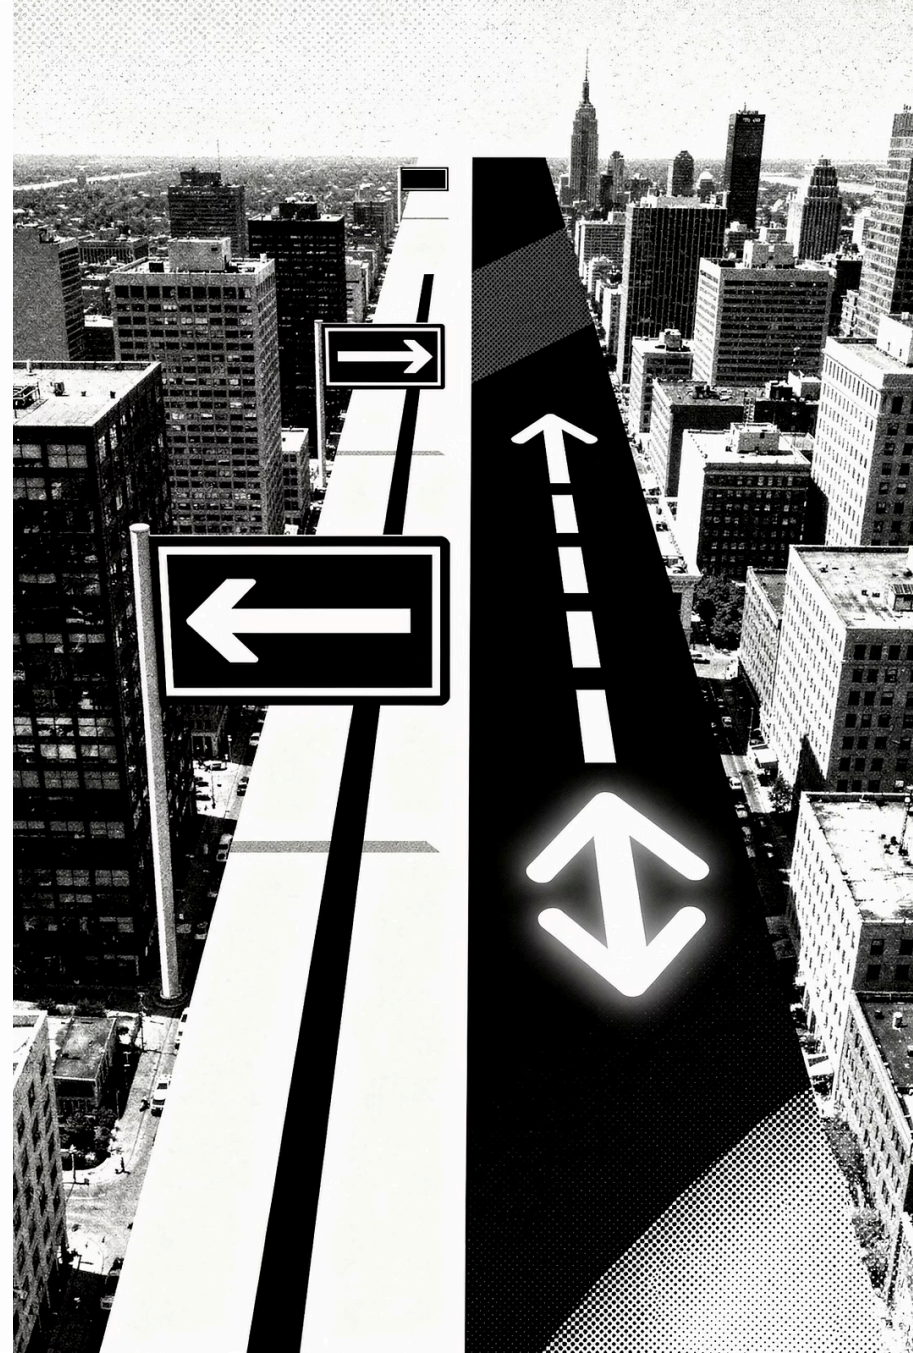

Why it's different

Every other app

Recommend once, forget.

Paréa Wander

Holds a belief about your group: lets reality correct it. The adventure bends to the people, live, in the place they already talk.

What's next

New-group mode

Questionnaire-based matching to form a paréa from strangers.

Native Android client

First-class mobile experience.

Post-adventure ratings

Feeding a recommender for smarter future adventures.

Cross-session learning

Which adventures fit which vibes.
Impersonal, no user tracking.

Smarter generation

Time-of-day, weather, and group-size aware.
